7. DATASET OVERVIEW

7.1 Abstract

This data set is data of captured or monitored *Bombus terrestris* in Hokkaido, Japan, which was designated as Invasive Alien Species by Invasive Alien Species Act. Data also includes monitoring data of native bumblebee species. Recorded data is date, place, name of species, behavior and caste, etc., and compiled annually. Participatory monitoring system is applied for data collecting. Most of monitors are local residents in Hokkaido.

8. DATA PROCESSING

8.1 General Explanation of the data producer's knowledge about the lineage of a dataset

Data was collected through the participatory monitoring system, and most of monitors are the local residents in Hokkaido. Monitors conduct occasional monitoring during the active season of bumblebees. When they capture/monitor *Bombus terrestris*, they record the date, weather, temperature, place, behavior (name of flower species in case of flower visiting) and caste. In the case that native bumblebee species is monitored, the name of species should be added to the recorded data. These data are sent to data manager for processing.
